STEP 2
Handheld System
CAC
Guard scans system approved ID or CAC and/or biometric
Fixed-Full System
CAC
Driver swipes system approved ID or CAC and/or scans biometric
License plate number is vetted, owner information obtained, current wants and warrants sent to DES (remote monitor and control location
STEP 1 (Open Base only)
AIE system captures license plate number (Open Base)

Fixed-Full System or Handheld System

The Automated Installation Entry (AIE) is a software and hardware system designed to read and compare personnel identification media. The results of the comparison are used to permit or deny access to installations IAW installation criteria. The system will expedite installation entry of authorized personnel.

Step 1: After an extensive check, personnel are enrolled and appropriate credential is provided if needed. Data is stored in registration database.

Step 2: The driver then approaches the lane and swipes a system approved ID or CAC at lane's reader. In the case of Handheld Lane Operations, the Guard will scan the driver's credentials. Information is compared to locally stored personal information and entry is allowed or denied based on information given. Use of biometrics for entry at higher FPCON levels.

Open Base

Step 1: As vehicle approaches the AIE system camera captures the license plate number and sends that information to department of motor vehicles for vetting and law enforcement sources..

Step 2: If there is a criminal match the remote monitoring station is alerted
